Unit Name	Abbr.	Definition	Quantity	Origin
acre (commercial) (36 000 ft <sup>2</sup> )	ac	3344.523	m <sup>2</sup>	area
acre (US survey) (43 560 ft <sup>2</sup> )	ac	4046.873	m <sup>2</sup>	area
acre foot (43 560 ft <sup>3</sup> )	af	1233.5	m <sup>3</sup>	volume
acre foot per day	af/d	14.276 49	L/s	flow, volumetric
acre foot per year	af/y	39.114	mL/s	flow, volumetric
acre inch (3630 ft <sup>3</sup> )	ac-in	102.79	m <sup>3</sup>	volume
agate (1/14 inch)		1.814	mm	length
American wire gauge	AWG	varies	m	length
angstrom	Å	100*	pm	length
API "weight" (petroleum)		equation	Pa·s	viscosity, absolute
astronomical unit	AU, ua	149.5979	Gm	length
atmosphere (standard)	atm	101.325*	kPa	pressure
atomic mass unit (unified)	u	1.660 566	yg	mass
barn	b	100*	fm <sup>2</sup>	area
barrel (drum, 55 US gallons)		208.4	L	volume
barrel (petroleum)	bbl	135	kg	mass
barrel (petroleum, statistical) (42 gal)	bbl	158.99	L	volume
barrel (US cranberry) (5826.5 in <sup>3</sup> ) ?	bbl	95.5	L	volume
barrel (US dry) (105 US dry qt)	bbl	115.628	L	volume
barrel (US fed. proof spirits) (40 gal) ?	bbl	151.416	L	volume
barrel (US federal) (31 gal)	bbl	117.348	L	volume
barrel (US liquid) (31.5 gal)	bbl	119.24	L	volume
billion cubic feet (gas)	Bcf	28.317	hm <sup>3</sup>	volume
Birmingham wire gauge (Stubs Standard)	BWG	varies	m	length
board foot (nominal)	bf	2.36	L	volume
body mass index (human health)	BMI	1*	kg/m <sup>2</sup>	mass per height squared
bottle (wine)		750*	mL	volume
British thermal unit (International table)	BtUIT	1.055 056	kJ	energy

## NOTES

### Column A: Unit name

Alternate names or explanations are in (parentheses). Names in "quotes" are slang expressions.

The current status of those units followed by a question mark (?) is uncertain; some may no longer be used.

### Units included on this list

Individual non-SI units used in the United States today, regardless of origin, including slang terms for SI units.

Compound (derived) units with special names or abbreviations (e.g., psi, cfs, gpm, mgd).

Old units no longer in widespread use but still encountered in some areas or fields (e.g., hand, furlong, grain).

Gauges used as units, even if the increment is not consistent (e.g., AWG, USS ga).

Non-linear scales used as units (e.g., Richter magnitude).

### Units excluded from this list

Compound units without special names or abbreviations (e.g., feet per second).

Obsolete units found *only* in historical sources (e.g., scruple, dry gallon, troy pound, cubit).

Prefixed multiples (e.g., milligal), *unless* prefixes are not normally used with that unit (e.g., microinch).

#### **Column B: Abbreviation or symbol**

Many units have several alternative symbols or abbreviations. The most common or preferred is given here.

#### **Columns C & D: Definition**

The definition is given in SI units, since all non-SI units are now ultimately defined by the SI base units.

Exact definitions are followed by an asterisk (\*); others are rounded to a precision appropriate for that unit.

*Equation* means the unit is defined by an equation rather than a numerical factor.

*Varies* means the unit increment varies slightly, so no single conversion factor can be given.

#### **Column E: Quantity**

The name of the quantity the unit measures. Some quantities have alternative names, not given here.

#### **Column F: Origin**

Most non-SI units have multiple origins and complex histories that are often obscure.

An attempt is made here to assign each unit to one of the six categories below, based on its earliest use.

The precise value may have changed over time, due to inaccurate standards.

1. Medieval (pre-1700) English version of an old European unit of Greek, Roman, French, Germanic, or other origin.
2. Medieval English invention (no known precedent in other countries).
3. Worldwide customary or scientific unit (neither metric nor English). Some are approved for use with SI.
4. Metric but non-SI unit, or a metric-English hybrid. A few are approved for use with SI.
5. British scientific or industrial unit (non-metric), invented after 1700.
6. US unit invented after 1800 (includes non-metric business, industry, and scientific units).
